Welcome to 4th IEEE International Workshop on Metrology for AeroSpace

On behalf of the organizing committee, we cordially welcome you to the 4th IEEE Workshop on Metrology for AeroSpace (MetroAeroSpace).

The fourth edition of MetroAeroSpace will be held in Padua, one of the oldest cities in Italy. The Botanic Garden of Padua, a UNESCO World Heritage Site, is the oldest Botanic Garden in the world, founded in 1545, and has collected numerous exotic and local species in the same location continuously through the centuries. With one of the oldest universities in the world officially founded on 1222, Padua was always an intellectual and artistic centre, which brought many art treasures to the city and made it a hotbed of revolutionary ideas.

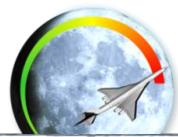

We are sure that the universally recognized historical beauty of Padua will be a perfect frame for this prestigious conference. It is, in fact, a further occasion, not only to meet old friends and new people from all over the world, but, moreover, to engage with them a continuous comparison directed to make wider the views on the technological progress of Metrology for AeroSpace.

The MetroAeroSpace organization was a complex task due to the large and increasing interest of our research and application areas. Efforts from many people were required to shape the technical program, arrange accommodation, manage the administrative aspects, and set up the social functions. We like to take this opportunity to thank all and each of them. We like also to thank the public and private organizations that supported the meeting in different ways.

A special thanks to Italian Army, Navy, Air Force and Arm of Carabinieri for supporting with several actions the Workshop. This year during the Workshop, static exhibition of civil and military systems will be offered:

- GOCE Satellite - Thales Alenia Space Italy site of Turin;
- SARAD - Automatic Data Analysis and Recording, organized by Italian Navy;
- PACKBOT 510, iRobot 110 FIRSTLOOK, tEODor, rovers employed by Italian Army.

The MetroAeroSpace Technical Program consists of 19 oral and poster sessions scheduled over three days. With the wide range of technical sessions covering the many fields of metrology for aerospace we are happy to welcome you to the variety of technical presentations that await you this year. Thanks to all of the Technical Program Committee members and the reviewers who have contributed to make this outstanding program possible.

The technical program was particularly difficult to be arranged since we received, for this fourth Workshop 135 abstracts from all over the world. Due to the time limits of the conference only 114 papers have been selected after a painstaking activity of the program committee and additional reviewers. We like to thank all people who contributed to this process with opinions, comments, and suggestions to choose the best papers and even improve their quality.

The technical program encompasses several events and activities. The keynote speeches will be held by experts in the field of metrology for aerospace; Dr. Franco Ongaro, ESA, Director of Technical and Quality Management (D/TEC), and Head of ESTEC, Netherlands, will describe *The technology support of the European Space Research and Technology Centre laboratories to space missions*, Dr. Kelly Chance, Senior Physicist at the Smithsonian Astrophysical Observatory and the Principal Investigator for the NASA/Smithsonian Tropospheric Emissions, will present *From TOMS to TEMPO: Monitoring of atmospheric pollution from space*.

We are honored to have them as plenary speakers and thank them in advance for coming to our conference to share their knowledge and experiences with us.

This edition of the Workshop includes;

- “*Military Metrology for AeroSpace*”, organized in cooperation with AFCEA Chapter of Naples, at Palazzo Zacco “*Circolo Unificato dell’Esercito*”, Padua (Italy), June 21st, 2017.
- a half day of tutorials offering three subjects:
 - Communication and Control for quadrotor-UAVs, Naïma Ait Oufroukh, *University of Évry, France*;
 - New Generation Data Recorder & Monitoring in Aircraft Maintenance, Fabio Grandi, *Flight Test Engineer, Army Aviation Test Centre Chief*;
 - Introduction to quantum communications: challenges and perspectives for Space, Giuseppe Vallone, *University of Padua, Italy*;
 - Radiation effects on electronics in space, Alessandro Paccagnella, *Vice Rector for International Relations, University of Padua, Italy*.

These events give more opportunities to contact Institutions and experts operating in different fields of Metrology for AeroSpace.

For the second time MetroAeroSpace will include Demo Session, organized as "Live Demonstration" track to allow an interactive and tangible form of presentation, which is quite different from the oral and poster sessions. Conference delegates are invited to experience the demonstrations directly, to interact with, play with, and challenge them. For this edition, we received four *live demonstration* proposals, during which

presenters will have the opportunity to show direct proof of their working systems and to create a lasting impression.

With the aim of providing a common ground for researchers to share their findings about the metrology for aerospace, the Workshop this year was improved by adding a significant number of Special Sessions. A first reason is that so many are the application fields of the metrology for aerospace that a single track could have been too much dispersive. A second reason is that, in spite of a centralized research address definition, a spontaneous aggregation of well-focused themes has been gathered, with specific aim of providing a forum of specific debate very close to the single research field. Therefore, several application-oriented Special Sessions have been organized this year. We wish to thank the organizers of these Special Sessions for their cooperation and support to the Workshop organization.

Several Awards offered by International Institution and Companies will be assigned, in particular to young researchers. In particular, the best contributions will be awarded, including the "*Best Paper Award*", the "*Best Paper Presented by a Young Researcher*" offered by LEONARDO Company, the "*Best Paper Authored and Presented by a Woman*" offered by Promex, and the "*Best Demonstration Award*" offered by AFCEA Chapter of Naples.

The Workshop is about to begin. You are now in a position to enjoy the fellowship of colleagues and experts and to pass free time in natural and artistic beauties. It is up to you to appreciate the Workshop worth! Be critical! We, metrologists, colleagues, and friends, we know that this is the best way to improve quality, and to achieve lasting excellences.

MetroAeroSpace 2017 Keynote Speakers

Keynote Thursday, June 22nd, 2017

The technology support of the European Space Research and Technology Centre laboratories to space missions

Dr. Franco Ongaro

*ESA, Director of Technical and Quality Management (D/TEC),
Head of ESTEC
Noordwijk, the Netherlands*

Dr. Ongaro graduated as a Doctor of Aeronautical Engineering from the University Politecnico of Milan. In 1987 he joined ESA, working at ESA HQ in Paris on the Columbus project. In 1988, he moved to ESTEC in the Netherlands as Head of the Columbus Payload Interfaces Unit. He was shortlisted as candidate in the European astronaut selection of 1991.

In 1994, Franco Ongaro moved back to HQ, to join the ESA Strategy Directorate as General Studies Programme Manager. In 2001, he initiated and managed the start of the Aurora exploration programme until 2005, when he became head of the ESA Advanced Concepts and Technology Planning Department, issuing the first ESA Technology Long Term Plan and creating the Advanced Concepts Team.

From 2007, he led the preparation and implementation of the Iris programme to develop a 'satcom' component for air traffic management. In 2009 he became Head of the Telecom Technologies, Products and Systems Department in the Telecommunications and Integrated Applications Directorate at ESTEC. From 1994 until 2009, he taught a one-semester graduate course in spacecraft design at the University Politecnico of Milan.

From TOMS to TEMPO: Monitoring of atmospheric pollution from space

Dr. Kelly Chance

*Senior Physicist at the Smithsonian Astrophysical Observatory,
the Principal Investigator for the NASA/Smithsonian Tropospheric Emissions
NASA, USA*

Kelly Chance is a Senior Physicist at the Smithsonian Astrophysical Observatory and the Principal Investigator for the NASA/Smithsonian Tropospheric Emissions: Monitoring of Pollution (TEMPO) satellite instrument that is currently being built to measure North American air pollution hourly from geostationary orbit (tempo.si.edu). He has been measuring Earth's atmosphere from balloons, aircraft, the ground and, especially, from satellites since receiving his Ph.D. from Harvard in 1977.

Measurements include the physics and chemistry of the stratospheric ozone layer, climate-altering greenhouse gases, and atmospheric pollution.

The first measurement of atmospheric pollution from space was likely that of SO₂, measured by the NASA Total Ozone Mapping Spectrometer on the Nimbus 7 satellite in 1982. Since that time a large array of satellite instruments for pollution monitoring has been developed internationally. Measurements are made from the infrared to the ultraviolet, capturing distributions of a minimally-redundant set of gaseous pollutants (at least one from each polluting chemical family), as well as aerosols. The measurement capability has culminated, for now, in a constellation of geostationary pollution monitors for Europe (Sentinel 4), Asia (the Geostationary Environment Monitoring Spectrometer, GEMS), and North America (Tropospheric Emissions: Monitoring of Pollution, TEMPO).
